## Klinge Corporation doing their part in international peacekeeping

York, PA, Jan. 13, 2009

The Bangladesh Military contracted Klinge Corporation to manufacture 20FT Refrigerated Container Systems for use in the region of Darfur in Sudan. Bangladesh is currently part of a United Nations mission to provide emergency relief in Darfur and urgently needed Refrigeration Systems to support their relief forces. The Container System is made up of three principal components:

- » 20 foot International Organization for Standardization (ISO) compliant, insulated container
- » Electrically powered refrigeration / freezing / heating unit
- » Heavy-duty integrated diesel engine generator set located within ISO container frame

The 20FT Container System provides multi temperature refrigeration with separate refrigerator and freezer sections and is available with a stowable moveable bulkhead, shelving, and side door. Additionally, the 20FT Container System was engineered for easy serviceability and features a reliable and simple to use microprocessor controller as well as oversized condensers for operation in high ambient temperature.

A large number of these Container Systems are also being supplied to the Commonwealth of Australia and the Hungarian government, which indicates its sophisticated design but easy to use interface. For increased durability and reliability, the Container System is available in a model proven to withstand M14 and M1 Vibration Tests, Performance/Cooling Tests, Driving Rain, and Electromagnetic Compatibility/Interference Tests, among other complex tests.

### About Klinge Corporation

Klinge Corporation is the leading provider of specialized transport refrigeration in the world and is ISO 9001 certified. The company's customized designs offer customers vital options when standard, mass-produced products cannot fulfil their needs. Continuing to build on excellence in design, engineering, and quality, Klinge combines experience and expertise with innovative refrigeration concepts to provide customers with the product design that best meets their needs. Klinge Corporation is located in York, Pennsylvania and has offices in Egypt and Denmark.
